Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a pedestal system, classified in class 343, subclass 757.
 - II. Claims 8-12, drawn to a method for achieving and rotational stiffness, classified in class 343, subclass 757.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, unpatenabilities of the group I invention would not necessarily imply unpatenability of the group II invention, since the device of the group I invention could be used by other and materially different processes from those of group II invention, for example, in the claim 1, wherein a base can be used in different device.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.
